# The Township of North Dundas

## *Energy Conservation and Demand Management Plan*

### Introduction

The Township of North Dundas has developed this plan in accordance with Ontario Regulation 397/11 of the Green Energy Act. This regulation requires that the broader public sector, and more specifically municipalities, report on the greenhouse gas emissions and energy consumption annually. Further, it requires the development and implementation of five year Conservation and Demand Management (CDM) plans commencing July 1st, 2014.

### Goals and Objectives

#### Vision

The Township of North Dundas staff, Department Heads, and Council will make reasonable efforts to comply with the nature and objectives of the Ontario Regulation 397/11 of the Green Energy Act. The Township of North Dundas is committed to lowering energy consumption and greenhouse gases through awareness and continuous improvement while keeping in mind any factors that may arise throughout its duration.

#### Goals

The Township of North Dundas' CDM plan is to work at lowering energy costs through energy conservation as well as to lessen our environmental impact through lowering our Green House Gas Emissions.

The Township of North Dundas will look at reducing energy usage by 4% every year over the duration of this plan from 2014 to 2019 by focusing on the 2011 baseline<sup>1</sup>. The Township of North Dundas' energy consumption includes electricity and natural gas.

#### Objectives

The Township of North Dundas' CDM plan will look at reducing energy consumption over the course of 5 years by:

- 1) Working on achieving energy efficiency in all Township facilities.
- 2) Monitor and report to departments on energy consumption annually
- 3) Analyze energy costs for savings and;
- 4) Raise staff and council awareness around energy efficiency.

#### Current Energy Consumption Baseline

The Township of North Dundas reports its energy consumption and GHG emissions annually using the Broader Public Sector Excel Template and in accordance with Ontario Regulation 397/11.

Energy Consumption and GHG emissions for 2011 have been reproduced and included (See Appendix A) and will serve as a baseline for this plan.

## Our Action List

The Township of North Dundas has been updating facilities including rooftop AC/Heating units and switching to newer, more efficient lighting throughout all of our buildings for the past 5 years and earlier. We are also in the midst of implementing an idle-free policy for Township vehicles, we have within the past year replaced 10 computers at the administrative building with newer, more energy efficient desktops. We are also encouraging those who have access to lighting to turn it off within their offices when they are not in residence.

The Township of North Dundas will aim to reduce GHG Emissions and energy consumption by continuing to implement practical and cost effective measures. Proposed measures will include all Departments working together to identify ways to reduce energy consumption and GHG Emissions, whether it is through technical, behavioral and or organizational initiatives.

The Township will prioritize the actions below based on ease of implementation.

Easy: requiring little effort

Medium: requiring intermediate or some effort

Difficult: requiring much effort or skill to accomplish, deal with, or understand

Description	Facility/Department	Action	Savings	Status
Asset Disposal	All Departments	The Township of North Dundas will consider disposal of underused assets (facilities) to reduce energy consumption and costs.	TBD	Difficult In progress Start - 2014 End - 2019
	All Departments	Ensuring staff are aware of internal energy savings through turning off work stations and unused lighting at end of day. Look into replacing light switches with occupancy sensors in commonly used rooms such as the washrooms, kitchen and photocopy room. Replace old appliances with more energy efficient ones.	Approx. \$200.00 per year	Easy In Progress Start - 2014 End - 2019
	All Departments	The Township of North Dundas is creating an anti-idling policy for its staff and fleet vehicles. This policy will aim to lower greenhouse gas emissions from fleet vehicles and lower fuel consumption	TBD	Easy In Progress Start - 2014 End - 2014
Procurement	All Departments	Over the course of the CDM the Township will investigate and potentially implement new, energy saving policies and practices.	TBD	Easy Not Started Start - 2014 End - 2019
	Public Works	The Township of North Dundas began replacing high pressure sodium streetlights with LED streetlights in early 2014. The Township will also be investigating replacement of parking lot high pressure sodium lights and converting to LED lighting.	Approx. \$50000.00 Per year	Difficult In Progress Start - 2014 End - 2019
AC/Heating replacement	Recreation	The Township of North Dundas will be looking at replacing the rooftop AC/Heating unit at the Joel Steele Arena within the next 5 years.	TBD	Medium In Progress Start - 2014 End - 2019
Energy Audits	All Departments	The Township of North Dundas will investigate energy audits throughout all of its facilities that are in use 40 hours or more a week, starting with the oldest buildings, to help identify and reduce energy usage.	TBD	Difficult Not Started Start - 2014 End - 2019

## Implementation

Some projects have been started and will take the full 5 years to plan, implement and realize with energy savings, while other plans will take a short time to accomplish and will be started once budget has been approved.

### Departmental Responsibilities

Each department will actively participate in assisting with lowering energy usage and implementation of the actions listed above. Each department will also be responsible for budgeting for the actions they are involved with, monitor results based on energy data provided by support staff and will provide regular updates on the stages of each action at regular Department Head meetings.

## Monitoring and Evaluation

### Monitoring

The Township of North Dundas, over the course of the 5 year CDM plan, will follow date guidelines set out and will attempt to implement actions according to budgeted amounts. Each Department will be in charge of establishing a budget for any action items within their department.

During the course of the planning, implementation and execution budget and external factors will be taken into consideration and the action may be altered to fit into a new budgeted amount. As well, during the course of planning if new energy saving actions are found they will be identified for future energy planning considerations.

### Evaluation

The Township of North Dundas' CDM plan will be reviewed and evaluated every 5 years in accordance with Ontario Regulation 397/11. The next review will begin in January of 2019. This CDM Plan has been approved by the Township of North Dundas' Department Heads and Council as of June 2014.

### CDM Plan

As per Ontario Regulation 397/11 The Township of North Dundas will ensure the Broader Public Sector (BPS) Excel Template for 2012 as well as the CDM Plan will be available to the public on the Township of North Dundas' website once the 2012 BPS Excel Template and CDM Plan have been approved.
